OWI®
Established 1978
OWI Incorporated

- **Supports up to 1000 ft. of Cat-5 wire per room**
- **Only 1 Cat-5 wire required per room**
- **660+ lines of video resolution**
- **Digital quality audio**
- **Each room independently controlled**
- **Infrared capability**

Daves By OWI
Distributed Audio/Video Entertainment System

Imagine watching your favorite DVD in high resolution with digital quality sound in the privacy of your own room. At the same time, your children are watching and listening to their favorite wire station in another room. What's so amazing about this scenario is that up to four sources of audio/video located in a single room, may be (1) independently controlled, (2) viewed and heard in full digital quality, (3) simultaneously delivered, in up to four rooms of your home or office with just a single Cat-5 wire to each room. No muss. No fuss.

OWI Sets the New Standard

OWI has created the perfect solution for distributing audio/video from multiple sources such as DVD, Wire, Satellite etc., and routing them throughout the home or office with a single, inexpensive category 5 twisted pair wire - the same type of wire used for computer networking. These signals can be distributed and controlled independently by infrared controls in up to four different (zones) rooms. This means that each room can enjoy audio/video from the same source or from different sources through a single Cat-5 wire routed to each of the four rooms.

DAVES is an extremely flexible and affordable solution for distributing all of your audio and video entertainment selections throughout the home or office.

OWI Sets the Standard by Which Other's Will Follow

1. Up to four sources can be routed to four rooms with 660 lines of video resolution over a single CAT 5 wire per room.

2. Coaxial systems provide only 420 lines of video resolution and require additional speaker wire and CAT 5 cable to be strung from room to room. This is a cumbersome, time consuming and a costly approach for distributing audio/video throughout the home.

3. Channel modulation provides only 330 lines of video resolution and reduces the quality of your DVD signal.

The DAVES Package

A single run of CAT 5 wire is extremely affordable at under 5 cents a foot. Compare this to a system using coax cables for video, CAT 5 wire for infrared and keypad control, and 14/4 AWG speaker wires for audio.

DAVES Simplifies/Clears Audio and Video Clutter

Your home might be ready for DAVES now because most newer homes and almost all new construction are already prewired with Cat-5 wire.

Compare the Advantages of DAVES by OWI

- **With the OWI DAVES, up to four audio/video sources can be routed to four rooms with 660 lines of video resolution and digital quality audio over a single CAT-5 wire per room. Each room can independently control those sources through a handheld, infrared remote control.**
- **Coaxial systems provide only 420 lines of video resolution and require additional speaker wire and CAT-5 wire to be strung from room to room. This is a cumbersome, time consuming and a costly approach for distributing audio/video throughout the home.**
- **Channel modulation provides only 330 lines of video resolution and reduces the quality of a standard DVD signal.**

DAVES is very affordable and easy to install. A single run of Cat-5 (category 5) wire is extremely affordable at under 5 cents per foot. Compare that to other systems running coax wires for video, Cat-5 wire for infrared control and keypads, and 14/4 AWG speaker wire for audio.

OWI®
Established 1978
OWI Incorporated

Only OWI Delivers the Sight, Sound and Control of Digital Quality Audio and High Resolution Video Throughout the Home with a Single Cat-5 Wire Per Room!

How Daves By OWI Works

SOURCE ROOM

Up to 4
Input Sources

Cat-5 Wire
(1 per room)
Supports up to
1000 ft length

Daves - Matrix Switcher
(DAV-1-MATRIX)

VIEWING/LISTENING ROOM 1

In-wall
Speaker

In-ceiling
Speaker

Plasma TV

In-wall Keypad Amplifier

In-wall Receiver

VIEWING/LISTENING ROOM 3
VIEWING/LISTENING ROOM 4
VIEWING/LISTENING ROOM 2

DAVES keeps all of your equipment in one area and distributes the Audio/Video signal throughout the house over a single Cat-5 wire per room. All video, digital audio, and infrared signals transmit from the Matrix Switcher through the Cat-5 wire simultaneously. The signal then goes to the in-wall receiver and to the television for video. It then travels from the in-wall receiver to the in-wall keypad/amplifier and then out to the speakers. Either the keypad or your remote control will allow you to select the equipment and audio/video - instantly.
